Sargis Nahapetyan

416-930-1609 | nahapetyansargis@gmail.com| LinkedIn | GitHub | Toronto, Ontario

SUMMARY

- Top student in Game Programming at Humber College as well as Seneca Polytechnic with a 4+ overall GPA. Highly technical with command of advanced mathematics and AI subsystems.
- Proven track record in Generative AI and Game Dev. Led a 40-person initiative to build and release a multiplayer game on Steam. Completed several cutting-edge AI projects independently and in teams
- Highly motivated and constantly evolving skills as a programmer and machine learning practitioner. Not afraid of working cross-functionally and wearing many hats, currently diving into software sales

EDUCATION

Seneca Polytechnic – Honours Bachelor of Interdisciplinary Studies 2023 – 2025
Humber College – Advanced Diploma in Computer Science, Game Programming 2020 – 2023
Centennial College – Advanced Diploma in Game Programming 2016 – 2019

INDEPENDENT EDUCATION

DeepLearning.AI – Claude Code: A Highly Agentic Coding Assistant 2025
HubSpot Academy – Email Marketing Certification Course 2025
HubSpot Academy – Content Marketing Certification Course 2025
Harvard University – CS50 Introduction to Artificial Intelligence 2025
Fast.AI – Practical Deep Learning for Coders 2024
Udemy – Blender Character Creator for Video Games 2024

EXPERIENCE

Software Sales Intern Jan, 2025 – April, 2025
Prolyncs Inc.

- Assisted in maintaining CRM records and updating sales pipelines, developed sales collateral and presentations
- Organized and gave product demonstrations to potential customers to scale company revenue

Software Engineer Intern Dec, 2023 – April, 2024
Niche Protocol Inc.

- Launched a LLM-based chatbot that is able to provide tailored recommendations to 5,000 active users
  - Built state of the art Retrieval Augmented Generation (RAG) chatbot system that combines context from a Postgres SQL database with queries to GPT 4 API to guide users through onboarding
  - Built multi-screen interface in React using functional components and integrated with React Navigation Released new feature on iOS; deployed the work to live users and monitored success metrics with team
- Worked as part of cross-functional engineering team in collaboration with designers and product managers
  - Led exploratory phase to understand technical requirements and project scope
  - Mentored other engineers by presenting learnings and collecting best practices into shared document

Software Developer Intern May, 2023 – Aug, 2023
Asclepius Snakebite Foundation

- Built a story driven educational visual novel using Python and open-source frameworks
  - Successfully developed UI and back-end features including navigation, facts entries, game menus
  - Wrote 3,000 LOC using development tools, such as version control with Git, Jira and code review
- Worked as part of cross-functional product team in collaboration with snake experts and doctors
  - Worked with snake experts and doctors for research purposes and to ensure authentic Snakebite facts

Teaching Assistant & Tutor — Sept, 2020 – May, 2023

Humber College

- Worked as a Teaching Assistant by working alongside professors during class time
  - Supported eight different classes across five semesters, including Linear Algebra, Physics, Graphics, Data Structures and Design Patterns, and both Game Engines (Unity) and Game Engines (Unreal)
- Worked as a Tutor to aid students in their learning success and help them understand complex concepts
  - Graded assignments, organized/led weekly sessions, and provided 1-on-1 and group support

Quality Assurance Tester & Consultant — Sept, 2018– April, 2019

Pirates, Vikings and Knights II

- Worked as a Quality Assurance Tester by working alongside the development team to address game issues
  - Took part in Q&A testing sessions with the development team
- Worked as a consultant for the game's Source Engine to help optimize the game, provide pointers and help establish the game's modding scene
  - Brought in as a consultant to assist the game's small development team, advised best practices for what independent modders would need to create content, created game mods to promote the game's steam workshop

IT Support — November, 2017 – May, 2018

Creation Technologies

- Deployed security cameras around Creation Technologies' main office
- Set up hardware, such as cabling for network servers and micro-desktops in conference rooms
- Provided IT assistance around the office, and helped debug and resolve user issues

PROJECTS

"The Causes and Effects of Video Game Addiction" — Hosted on Google Site

Seneca Polytechnic Capstone Research Paper

- A 28-page research paper that seeks to describe as well as explore what specific elements of video games contribute to video game addiction for young adults and teens.
- The research paper uses academic journal articles as well as research studies for data. In particular, it uses data that explored video game mechanics, length of time data, age, and the effects of too much screen time to a person. In addition, the paper looks at core links between gambling and gaming addiction to see if there is a coloration between the two.
- Research was conducted in a span of two years throughout the program. Where many drafts, peer reviews, research gathering, literature reviews, and revisions were made.
- Peer-reviewed by Professor Jeffrey D. Lloyd of The School of Arts & Science and program coordinator Professor Taunya Tremblay.

Indie Game Recommender

LLM Chatbot Web App

- Used cutting-edge Retrieval Augmented Generation (RAG) paradigm to create chatbot that can recommend indie games to the user through a dynamic interface

- Wrote typescript scripts to load Postgres embeddings database with publicly available API data on video game releases. Wrote custom tasks for GPT 4 API to read and write from embeddings DB
- Built chat user interface using React, Typescript and CSS on Next.js and deployed using Vercel

Fake News Detector — Hosted on Hugging Face

NLP Web App

- Fine-tuned a Hugging Face Transformers NLP model with dataset of 50,000 articles labeled as credible or not in Python using Jupyter notebooks, PyTorch and Fastai libraries
- Created and released a web app using Gradio that allows users to paste in news article titles and text, and have the AI predict whether it is "fake news" or "reliable"
- Successful proof of concept that achieved 99% accuracy score on independent test set

Hobby Logo Detector — Hosted on Hugging Face

Computer Vision App

- Built cutting-edge computer vision web app that can recognize and classify symbols from the Warhammer franchise, even when they are distorted (e.g. on tattoos) or hard to spot (in-game)
- Achieved this by building a scraper that pulled thousands of images to fine-tune a DenseNet121 model, using data augmentation techniques for better training. Used Python, PyTorch and Fastai
- Built and released a Gradio web app that allows using the camera as well as uploading photos

WOE — Hosted on itch.io

Unity & C# Game Project

- Capstone project for Humber College, worked with two students as a development team lead
- Developed a networked multiplayer first-person horror survival puzzle game with AI monsters
- Built the game's artificial intelligence, networking, interface and gameplay mechanics in C#

EQUINOX — Hosted on Steam

UNREAL & C++ Game Project

- Voted by class to be the leader of 40-student initiative to create a dodgeball themed PvP game
- Programmed the game's shooting systems and dodgeball mechanics in C++ and Unreal Engine
- In charge or source control; used Git and GitHub best practices to ensure successful collaboration between all teams. Project managed the whole initiative using Trello

HEXES UNDERWORLD

OPENGL, UNITY & C++

- Developed a fantasy-themed roguelike game in C++ and a fully custom-built OpenGL engine
- Was overall responsible for engine optimization, making 3D models, and one of three main programmers. Primarily focused on the game's combat system, and ported to Unity

CUSTOM GRAPHICS ENGINES

XML, GLSL, OPENGL & C++

- Created and still maintaining a fully custom-built 3D graphics engine powered by OpenGL
- Features a working skybox, texture shader, frustrum calling, 3D model loading and other features
- Other functionality includes mouse inputs, a working asset manager via XML manifest, various shaders, such as Fresnel and noise.

Game Jam Projects

Submissions for Game Jam Competitions

- Mini Jame Gam #16: My Kitty Boo Boo – Unity 3D

- **Humber College 2023**: Roots – Unity 3D
- **Humber College 2021:** Lost in Tacs – Unity 3D
- **Humber College 2020:** Crash Course – Unity 3D

Other Projects

- **One Bone:** Unity Capstone Project (Centennial) – Hosted on GitHub
- **Breaking Glass**: Three.js Physics Game – Hosted on GitHub
- **Ferris Wheel**: Three.js Project Demo – Hosted on GitHub
- **Solar System**: Three.js Project Demo – Hosted on GitHub
- **Blood Boil**: TypeScript Game Project – Hosted on GitHub

Independent Game Modding (Hobby)

Garry's Mod

- **[CW 2.0] Sci-Fi Aug:** Game weapon with 50,085 Current Subscribers – Hosted on Steam Workshop
- **[CW 2.0] Cases (Unofficial):** Storage Entities with 62,811 Current Subscribers – Hosted on Steam Workshop
- **[CW 2.0] Sci-Fi Pistol:** Game weapon with 35,906 Current Subscribers – Hosted on Steam Workshop

Pirates, Vikings and Knights II

- **[MODEL] Gothic Knight:** Knight model with 4,069 Current Subscribers – Hosted on Steam Workshop
- **[WEAPON] MANG IN GRAZ DE LUXE:** Weapon with 3,910 Current Subscribers – Hosted on Steam Workshop
- **[WEAPON] Steel Arming Sword:** Weapon with 1,174 Current Subscribers – Hosted on Steam Workshop

SKILLS

Front-end: React, JS, TypeScript, HTML, CSS

Back-end: Node.js, SQL, Postgres, Vercel, AWS

Tools: Git, Jira, Jupyter Notebooks, Bash, Trello, Linux

AI: PyTorch, Numpy, OpenAI API, Transformers

Languages: Python, C#, C++, Lua, Java

Gaming: Unity, Unreal, Blender, 3DS Max, GPUs

Development: Agile, Scrum, Code Review, Git

Backend: Firebase, Azure, GraphQL, REST

Video Game Modding: Garry's Mod |Pirates, Vikings and Knights II

AI Coding Assistant: Cursor, Copilot, Claude Code
